# AI can supercharge Lithuania's ecosystem of innovative digital businesses, boosting productivity and competitiveness

If Lithuania scales innovative digital businesses to the levels of leading OECD countries, this could:

> Create **23,000 high-value jobs**, supporting the future competitiveness of the Lithuanian workforce

> Contribute **EUR 1.4 billion** annually to the economy

Fostering more successful innovative digital businesses benefits society through positive spillovers. They:

Create transformative innovations

Propel AI adoption across the economy
